Puppy - a Linux distribution for the OpenFirmware-based embedded systems Raspberry Pi - a single-board computer based on the ARM instruction set architecture RISC OS - a real-time operating system for microcomputers SCO Unix - a proprietary Unix-like operating system derived from AT&T Unix SLE - a Linux distribution targeted at the server market

*** State the name and context of the concept of . . .

*** The instruction set architecture (ISA) defines the set of instructions that can be executed by a microprocessor. Which of the following aspects of the instruction set architecture are not defined by the ISA? (Choose two.)

*** Software interrupts cause a software process to be interrupted, before execution of the program is allowed to continue. Software interrupts are what makes a microprocessor different from other types of computing devices. What role do hardware interrupts play in a microprocessor?

*** Why is Linux so popular?

*** What percentage of the total number of devices that are shipped with an operating system of any type is attributable to microprocessor devices?

*** What role does mass storage play in a computer?

*** What programming language is used to write most of the operating system software for a personal computer?

*** What is the difference between the concept of a user interface and the concept of a graphical user interface (GUI)?

*** What is the difference between a layer of an OS and a layer of an application?

*** What is the difference between an and a library?

*** What is the difference between a _device driver_ and an _application program_?

*** What is the difference between user-level and kernel-level access to the operating system?

*** What is the difference between a native and a language?

*** What is the difference between the user-mode and kernel-mode Linux?

*** What is the difference between an library and a virtual machine?

*** What is the difference between a BIOS and an _embedded_ BIOS?
